

Testing Strategies for Struggling Learners

Helping Your Struggling Learners Not Just Navigate, But EXCEL on Standardized Assessments!

This workshop provides strategies your student teachers can implement immediately to help students with this year's test cycle.

This training will provide supplemental strategies for even the most vulnerable students.

A lack of testing nuances and how to approach standardized assessments trip up many "at-promise" students. They know so much more than they demonstrate!

Some of the topics to be addressed:

- ▶ **The ABCs of Testing** - basic strategies to help struggling learners focus during the test.
- ▶ **Vernacular and Nomenclature Preparation Activities** - Prepare students for the pervasive amount of "difficult" terms they are intimidated by on end-of-year assessments.
- ▶ **Strategies for solving multi-step problems.**
- ▶ **Ways to build endurance** so students can last long enough to do well.
- ▶ **How to get students to take the test seriously!**
- ▶ **Participant driven topics** (comprehension strategies, computer testing strategies, etc.)

This is a powerful, paradigm shifting event. From the opening minute to the last second, your student teachers will receive strategies that will help increase their students' achievement.

This workshop is conducted by educational consultant and national presenter, Larry Bell. Larry has helped schools and districts nationwide increase their student achievement for over 20 years.
